1. Introduction

This technical sheet covers all products exported from Colombia to the European Union under HS code 130219: Vegetable saps and extracts (excluding liquorice, hops and opium).

This document will allow Colombian exporters to identify and understand the main requirements to export extracts from Colombia (exit requirements), as well as to access the European Union market (entry requirements). The different sections of the document cover all regulatory requirements and buyer requirements for this product group.

Please, note that it is the responsibility of each exporter to verify the regulations applicable to their product and their updates or modifications.

2. Colombian requirements: Exporting extracts

Colombian exporters must meet a series of conditions before exporting

extracts. Before engaging in the export process from Colombia, the exporter must always be registered at the DIAN¹ (Colombian Tax and Customs Department) adding in their RUT that they are going to export.

Extracts whose end-use is animal or veterinary have to obtain a zoo-sanitary certificate by the Colombian Agricultural Institute (ICA)². For food or cosmetics industry end-use, the mandatory sanitary notification will be issued by the Colombian Food and Drugs Administration (Invima)³. For medical or scientifically-controlled ends, the certificate is issued by the ICA or Invima.

In addition, exporters must have all the legal documentation applicable to their product.

3. International regulatory framework

3.1 Convention on International Trade in Endangered Species

1. <https://www.dian.gov.co>
2. <https://www.ica.gov.co>
3. <https://www.invima.gov.co>

The conservation and sustainable use of natural resources is a crucial issue in the international agenda, involving the public and private sectors, as well as civil society. The international market is subject to specific provisions which regulate the trade of threatened flora and fauna species, which are reflected in the European Union legislation.

Exports to the European Union of an endangered species, or its derivatives, need specific export permits issued by Colombia's competent authorities. The regulatory framework, its details and related procedures are explained below:

The Convention on International Trade in Endangered Species or CITES (Washington Convention)⁴, is a multilateral treaty aimed at protecting endangered plants and animals. CITES went into force on 1 July 1975 and is directed at ensuring that international trade in wild animals and plants does not threaten the survival of at-risk species in the wild.

In CITES, plant (and animal) species are subject to different degrees of regulation according to three Appendices⁵:

Appendix I includes species threatened by extinction, for which trade is subjected to stricter regulation,

and is only authorised in exceptional circumstances for specimens of wild origin. Commercial trade in wild taken specimens of Appendix-I listed species is generally unallowed.

- Appendix II includes species that are not necessarily now threatened with extinction but may become so unless trade is strictly regulated.
- Appendix III contains species that are subject to regulation within the jurisdiction of a CITES Party and for which the co-operation of other CITES Parties is needed to prevent or restrict their exploitation.

CITES covers all parts of derivatives of plant species, unless specifically exempted, including extracts. Extracts are defined in CITES as any substance obtained directly from plant material by physical or chemical means regardless of the manufacturing process. An extract may be solid (e.g. crystals, resin, fine or coarse particles), semi-solid (e.g. gums, waxes) or liquid (e.g. solutions, tinctures, oil and essential oils)⁶.

The implementation of CITES within the European Union is governed by a set of regulations known as EU Wildlife Trade Regulations:

Council Regulation (EC) No 338/97⁷

4. <https://cites.org/eng/disc/what.php>

5. https://ec.europa.eu/environment/cites/pdf/referenceguide_en.pdf

6. <https://cites.org/eng/app/appendices.php>

7. <https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1583168086765&uri=CELEX:01997R0338-20200101>

(main regulation) on the protection of species of wild fauna and flora by regulating trade therein.

- Commission Regulation (EC) No 865/2006⁸ (as amended by Commission Regulation (EC) No 100/2008, Commission Regulation (EU) No 791/2012 and Commission Implementing Regulation (EU) No 792/2012) laying down detailed rules concerning the implementation of Council Regulation (EC) No 338/97.
- Commission Implementing Regulation (EU) No 792/2012⁹ of 23 August 2012 laying down rules for the design of permits, certificates and other documents provided for in Council Regulation (EC) No 338/97 on the protection of species of wild fauna and flora by regulating the trade therein and amending Regulation (EC) No 865/2006.

These regulations are directly applicable in the Member States¹⁰ and go beyond CITES-listed species. The main differences between CITES and the EU Regulation are highlighted in the document *The Differences between EU and CITES Provisions in a Nutshell*¹¹.

The species covered by Regulation (EC) No 338/97 are listed in four Annexes (A to D)¹²:

Annex A:

- All CITES Appendix I species, except where EU Member States have entered a reservation
- Some CITES Appendix II and III species, for which the EU has adopted stricter domestic measures.
- Some non-CITES species.

Annex B:

- All other CITES Appendix II species, except where EU Member States have entered a reservation.
- Some CITES Appendix III species.
- Some non-CITES species.

Annex C:

- All other CITES Appendix III species, except where EU Member States have entered a reservation.

Annex D:

- Some CITES Appendix III species for which the EU holds a reservation.
- Some non-CITES species in order to be consistent with other EU regulations on the protection of native species, such as the Habitats Directive and the Birds Directive.

11. https://ec.europa.eu/environment/cites/pdf/differences_b_eu_and_cites.pdf

12. https://ec.europa.eu/environment/cites/legislation_en.htm

Examples of plants used as extracts in cosmetics, food supplements, and/or medicinal products in each Annex of Regulation (EC) No 338/97:

Annex	Examples of plant species used for extracts
Annex A	<ul style="list-style-type: none"> Asian slipper orchids (<i>Paphiopedilum spp.</i>)
Annex B	<ul style="list-style-type: none"> African cherry (<i>Prunus Africana</i>) Hoodia (<i>Hoodia spp.</i>) Aloe ferox (<i>Aloe ferox</i>)
Annex C	-
Annex D	<ul style="list-style-type: none"> Devil's claw (<i>Harpagophytum spp</i>) Arnica (<i>Arnica montana</i>)

In order for buyers in the European Union to import species (and derivatives) that are listed in the Annexes, they must arrange permits / notifications according to the specific Annex in which they're listed. **An export permit from the supplying country (Colombia) is also required for species listed in Appendices I and II of CITES (Annexes A and B of the EU regulation), and for Appendix III (Annexes C and D) if the supplying country's government has listed the species in this appendix¹³.** The import permit is only issued after a copy of a valid export permit from the CITES Authority in the country of export has been received by the competent authority in the EU country.

Exporters in Colombia must begin the export procedure by contacting the

Colombian CITES Management Authorities¹⁴, and apply for a CITES export/re-export permit. The permits (import and export or re-export) shall be presented, as originals, to the Customs.

Export permits must be endorsed, with quantity, signature and stamp, by the competent authority, in the export endorsement block of the document. If the export document has not been endorsed at the time of export, the Management Authority of the importing country in the European Union should liaise with the Colombian authorities to determine the acceptability of the document¹⁵.

More information can be found on the page of the European Commission: *CITES: Permits, Certificates and Notifications*¹⁶.

3.2 Nagoya Protocol

The implementation of the Nagoya Protocol on Access and Benefit Sharing (ABS) has important implications for natural ingredients, including extracts, and their suppliers. Even though the responsibility to comply with the European regulation belongs to the user of the generic resource (i.e. European importer, manufacturer, etc.) Colombian exporters of natural ingredients must understand and comply with the local Access and Benefit Sharing legislation and assist their buyers in achieving compliance. This can be done by developing specific checkpoints and monitoring obligations through the supply chain.

The Nagoya Protocol, on Access and Benefit Sharing (ABS), is an international treaty which has been in force since 2014. Its main objective is the fair and equitable sharing of benefits derived from the use of genetic resources. This means that, when benefits arise from research or development on genetic resources (including when it leads to the commercial use of a developed product), these benefits should be shared fairly and equitably with the country providing these resources¹⁷.

The European Union is a signatory of the Nagoya Protocol. This means that the European Union as a regional bloc and their individual countries are

legally obliged to implement mechanisms and to comply with its principles. These obligations are reflected in business practices in both export and import countries / end markets. As such, Colombian exporters are also expected to comply with the national legislation addressing Access and Benefit Sharing (ABS).

The Nagoya Protocol is implemented in the European Union through Regulation (EU) No 511/2014 of the European Parliament and of the Council, on compliance measures for users from the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization in the Union¹⁸.

The regulation holds users of genetic resources or traditional knowledge accountable for exercising and demonstrating due diligence in relation to access to these resources / knowledge. The due diligence process includes compliance with the applicable legislation in countries where the genetic resource is sourced (example: Colombia) in terms of:

- Obtaining prior informed consent (PIC) of the country in which the genetic resource is located before accessing the resource.
- Negotiating and agreeing on the terms and conditions of access and use of this resource through the

17. https://ec.europa.eu/environment/nature/biodiversity/international/abs/index_en.htm

18. <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32014R0511>

establishment of mutually agreed terms (MAT).

This due diligence process also implies that users should collect, keep and transfer to subsequent users the information relevant to ensure compliance with the due diligence requirements. Users also have the obligation to declare to the National Competent Authorities of their Member State that they exercised due diligence, at the end of utilization. This declaration is called Due Diligence Declaration (DDD)¹⁹.

The European Commission has published the *Guidance document on the scope of application and core obligations of Regulation (EU) No 511/2014 of the European Parliament and of the Council on the compliance measures for users from the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization in the Union*²⁰ (Horizontal Guidance) with the purpose to help users to comply with the requirements of Regulations (EC) 511/2014 and (EC) 2015/1866. The regulations apply to derivatives such as plant extracts. According to the EC Horizontal Guidance, “access to derivatives is covered when it also includes genetic resources for utilization, i.e. when access to a derivative is combined

with access to a genetic resource from which that derivative was or is obtained.”²¹

4. EU: Chemicals legislation

4.1 Registration, Evaluation, Authorization and Restriction of Chemicals (REACH)

Registration, Evaluation, Authorization and Restriction of Chemicals (REACH), Regulation (EC) No 1907/2006 of the European Parliament and of the Council²², is a regulation of the European Union which was adopted to improve the protection of human health and the environment from the risks that can be posed by chemicals, while enhancing the competitiveness of the EU chemicals industry²³. This regulation requires the industry to have sufficient knowledge about the properties of their substances and to manage their potential risks.

One of the main reasons for developing and adopting the REACH Regulation was that a large number of substances have been manufactured and placed on the market in Europe for several years with insufficient information on the hazards that they pose to human health and the environment²⁴.

23. <https://echa.europa.eu/regulations/reach/understanding-reach>

24. https://ec.europa.eu/environment/chemicals/reach/reach_en.htm

A “substance” is defined in REACH²⁵²⁶, as: a chemical element and its compounds in the natural state or obtained by any manufacturing process, including any additive necessary to preserve its stability and any impurity deriving from the process used, but excluding any solvent which may be separated without affecting the stability of the substance or changing its composition²⁷.

REACH has consequences mainly to Natural Complex Substances (NCS) of botanical origin used in cosmetics. The NCS are described by ISO 9235:20138 (Aromatic Natural Raw Materials), which include plant extracts, most notably CO₂ extracts, infusions and alcoholic extracts²⁸.

The registration and authorization requirements of REACH do not apply to substances traded in quantities lower than one tonne by one specific company, or used in²⁹:

- Scientific research and development
- Food and feed
- Medicinal products

European Union-based manufacturers or importers are the ones responsible for compliance with the REACH

regulation. However, non-EU suppliers are expected to facilitate the necessary information and documentation which will enable EU importers to comply with their regulatory obligations. Alternatively, a non-EU supplier of plant extracts can register ingredients themselves through an “only representative” established in the EU³⁰. This can give them more flexibility as a supplier, as they are not dependent on an importer who is registered³¹. However, it is important to keep in mind that REACH costs and fees are very high, and the process requires extensive documentation.³²

The website of the European Chemicals Agency (ECHA) Understanding REACH³³ explains in detail the process of Identification, Registration, Evaluation and Authorization / Restriction of substances. In addition, the website Information on Chemicals³⁴ contains the full list of substances which are:

- Registered before the European Chemicals Agency (ECHA), for which all public data submitted to ECHA in REACH registration dossiers by substance manufacturers, importers, or their representatives, as laid out by the

REACH Regulation, are available³⁵.
Examples:

- *Euterpe precatória* extract: CAS number 906655-61-6; EC number 472-120-5³⁶
 - Vanillin: CAS number 121-33-5; EC number 204-465-2³⁷
 - 2-ethoxy-4-(hydroxymethyl) phenol (white vanilla), ext.: CAS number 4912-58-7; EC number 674-192-5³⁸.
 - *Tagetes minuta* extract: CAS number 91770-75-1; EC number 294-862-7³⁹
 - *Indigofera tinctoria*, ext.: CAS number 84775-63-3; EC number 283-892-6⁴⁰
 - Cocoa, ext.: CAS number 84649-99-0; EC number 283-480-6⁴¹
- Pre-registered. Pre-registration intentions for these substances were submitted to the European Chemicals Agency (ECHA) between 1 June and 1 December 2018. Full registration is required for all substances manufactured or imported in quantities of one tonne or more per year per manufacturer or importer, unless they are exempted⁴². Examples:
 - *Capsicum annuum*, ext.: CAS number 84625-29-6; EC number 84625-29-6⁴³
 - *Physalis physalis*, ext.: CAS number 93062-84-1; EC number 296-840-2⁴⁴
 - *Myrocarpus frondosus*, ext.: CAS number 91722-94-0; EC number 294-497-3⁴⁵
 - *Cinchona officinalis*, ext.: CAS number 84776-27-2; EC number 283-952-1⁴⁶
 - Registered in quantities between 1 and 10 tonnes, predicted to meet criteria for category 1A or 1B for carcinogenicity, mutagenicity or reproductive toxicity (defined in Annex III of REACH)⁴⁷. The fact that a substance is not in this list does not necessarily mean that the criteria for Annex III are not met⁴⁸. If the substance is in the Annex III inventory, the company responsible for its registration will most likely need to submit the full Annex VII information⁴⁹. Examples:
 - *Gaultheria procumbens*, ext.: CAS number 68917-75-9; EC number 614-802-9. Criteria:

Suspected hazardous to the aquatic environment, Suspected mutagen, Suspected toxic for reproduction⁵⁰

- Coffee, *Coffea arabica*, ext.: CAS number 84650-00-0; EC number 283-481-1. Criteria: Suspected toxic for reproduction⁵¹.

4.2 Classification, Labelling and Packaging (CLP)

The Globally Harmonized System (GHS) of Classification and Labelling of Chemicals⁵² is a system developed at the United Nations level to standardize and harmonize the management of chemicals globally. The United Nations Purple Book⁵³ is a guide on the implementation of the GHS which:

- Defines the physical, human health and environmental hazards and harmonizes the criteria for their classification according to these hazards;
- Standardizes the content and format of the chemical substances' labelling and Safety Data Sheets (SDS).

The GHS is governed in the European Union through Regulation (EC) No 1272/2008 of the European

Parliament and of the Council on classification, labelling and packaging of substances and mixtures⁵⁴. **The regulation on Classification and Labelling of Chemicals (CLP) applies to plant extracts regardless of the quantities traded. Therefore, substances traded in quantities of less than one tonne are not exempted.**

Classification and labelling

Regulation (EC) No 1272/2008 defines the content and presentation of the label. The label must be firmly attached to one or more of the packaging's surfaces and has to include the following information (as per Article 17):

- The name, address and telephone number of the supplier.
- The nominal quantity of a substance or mixture in packages made available to the general public, unless this quantity is specified elsewhere on the package (if applicable).
- Product identifiers (example: EC number, CAS number).
- Where applicable (i.e. for hazardous substances), hazard pictograms, signal words, hazard statements, precautionary statements and supplemental information required by other legislation⁵⁵.

50. <https://echa.europa.eu/substance-information/-/substanceinfo/100.120.979>

51. <https://echa.europa.eu/information-on-chemicals/annex-iii-inventory/-/dislist/details/AIII-100.075.866>

52. <https://unece.org/about-ghs>

53. <https://unece.org/ghs-rev8-2019>

54. <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32008R1272>

55. <https://echa.europa.eu/es/regulations/clp/labelling>

Article 17 of Regulation (EC) No 1272/2008 also establishes that the label shall be written in the official language(s) of the Member State(s) where the substance or mixture is placed on the market, unless the Member State(s) concerned provide(s) otherwise.

Articles 31 to 33 of the Regulation (EC) No 1272/2008 addresses the rules governing the applicable of labels:

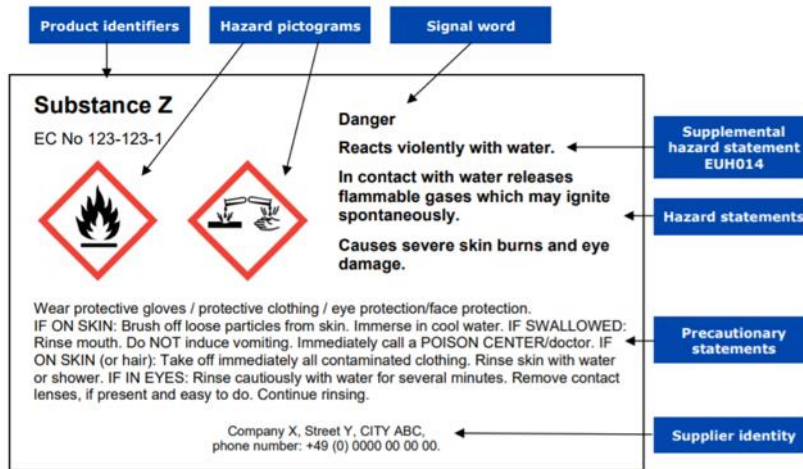

- Labels shall be readable horizontally when the package is set down normally.
- The colour and presentation of any label shall be such that the hazard pictogram stands out clearly. The label elements shall be clearly and permanently marked. They shall stand out clearly from the background and be of such size and spacing as to be easily read.
- The shape, colour and the size of a hazard pictogram as well as the dimensions of the label shall be as set out in section 1.2.1 of Annex I.
- Hazard pictograms shall have a black symbol on a white background with a red frame sufficiently wide to be clearly visible.
- Hazard pictograms shall be in the shape of a square set at a point. Each hazard pictogram shall cover at least one fifteenth of the surface area of the harmonized label but the minimum area shall not be less than 1 cm².

- The dimensions of the label shall be as follows:

Capacity of the package	Dimensions of the label, in millimeters
Not exceeding 3 liters:	If possible, at least 52 x 74
Greater than 3 liters but, not exceeding 50 liters:	At least 74 x 105
Greater than 50 liters but not exceeding 500 liters:	At least 105 x 148
Greater than 500 liters:	At least 148 x 210

- The hazard pictograms, word of caution / signal word, hazard statements and precautionary statements shall be located together on the label.

The European Chemicals Agency (ECHA) has a detailed document, the Guidance on labelling and packaging in accordance with Regulation (EC) No 1272/2008⁵⁶, provides step-by-step instructions on how to comply with this regulation. It also contains a few examples of generic labels complying with the CLP requirements, such as:

You can find an elaborate definition of the flammability, risk phrases and safety phrases in Directive 2001/59/EC⁵⁷. The Directive provides technical information for implementing European Union regulation on Classification, Labelling and Packaging. In addition, the database

of the *C&L Inventory*⁵⁸ on the website of the European Chemicals Agency (ECHA) contains all the necessary information on the classification and labelling of the substances which have been notified and registered by manufacturers and importers in the EU. Examples:

Hazard class and Category code(s) / Hazard statement code(s)	Labelling phrase	Signal words and Pictograms
<i>Euterpe precatoria</i> extract: EC number 472-120-5 ⁵⁹		
Skin Sens. 1B / H317	May cause an allergic skin reaction.	Signal Word: Warning Pictograms:  Exclamation mark
<i>Myrocarpus frondosus</i> extract: EC number 294-497-3 ⁶⁰		
Skin Sens. 1B / H317 Eye Irrit. 2B / H319 Aquatic Acute 1 / H400 Aquatic Chronic 1 / H410	May cause an allergic skin reaction. Causes serious eye irritation. Very toxic to aquatic life. Very toxic to aquatic life with long lasting effects.	Signal Word: Warning Pictograms:   Environment Exclamation mark

The classification and labelling information for specific substances must also be included in the Safety Data Sheets (SDS), regulated in the European Union by Annex II of the REACH regulation⁶¹, which contains the necessary data that an SDS must have. This is a separate document that must be submitted to the buyer, and which is explained in more detail

in section **7.2. Documentation requirements.**

Packaging

Article 35 of Regulation (EC) No 1272/2008 defines the packaging requirements of hazardous substances⁶²:

57. <https://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2001:225:0001:0333:EN:PDF>

58. <https://echa.europa.eu/es/information-on-chemicals/cl-inventory-database>

59. <https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/notification-details/117846/828029>

60. <https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/notification-details/37392/1533696>

61. <https://echa.europa.eu/regulations/reach/legislation>

62. https://echa.europa.eu/documents/10162/23036412/clp_labelling_en.pdf/89628d94-573a-4024-86cc-0b4052a74d65

- The packaging is designed, constructed and fastened so that the contents cannot escape.
- The materials of the packaging and fastening are not damaged by the contents and are not liable to form hazardous compounds with the contents.
- The packaging and fastenings are strong and solid throughout to ensure that they will not loosen.
- Packaging fitted with replaceable fastening devices is properly designed to allow repeated refastening without the contents escaping.
- The packaging does not attract or arouse the curiosity of children or mislead the consumer when supplied to the general public.
- The packaging does not have a similar presentation or a design used for foodstuff or animal feed stuff or medicinal or cosmetic products which would mislead the consumers.

For recommendations of specific packaging materials which will allow suppliers of plant extracts to comply with these requirements, consult section **7.3. Packaging and Transport**.

5. EU: Cosmetics legislation

In the European Union, cosmetic products are regulated by Regulation (EC) No 1223/2009 of the European Parliament and of the Council on cosmetic products⁶³. The regulation requires the responsible person to safeguard that the cosmetic product has gone through a basic safety assessment based on relevant technical information before the product can be marketed in the European Union. In addition, a product safety report has to be prepared according to Annex I of this regulation. The guidelines for Annex I are set out in Commission Implementing Decision 2013/674 / EU⁶⁴.

The cosmetics regulation mainly focuses on finished cosmetics products, but has consequences for suppliers of natural ingredients such as plant extracts, particularly. Annexes II and III establish that the responsible individual or company in the European Union (importer, agent, manufacturer, etc.) must safeguard compliance to the legal requirements. However, this means that non-EU ingredient suppliers have the direct responsibility to support the responsible person or company in complying with its various provisions, as detailed in the next sections.⁶⁵

CosIng database

CosIng is the European Commission

63. https://ec.europa.eu/growth/sectors/cosmetics/legislation_en

64. <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32013D0674>

65. https://www.aemps.gob.es/publicaciones/publica/docs/Guia_Aceites_Esenciales.pdf?x42633

database for information on cosmetic substances and ingredients contained in the:

- Cosmetics Regulation (EC) No 1223/2009 of the European Parliament and of the Council⁶⁶
- Cosmetics Directive 76/768/EEC (cosmetics directive), as amended⁶⁷
- Glossary of common ingredient names for the purpose of labelling cosmetic products placed on the market (as established by Decision (EU) 2019/701 of 5 April 2019)⁶⁸

The Cosmetic Ingredient (CosIng) database⁶⁹ has two sections:

- Section 1 - It consists of all the cosmetic ingredients, except perfume and aromatic raw material.
- Section 2 - It consists cosmetic ingredients related to perfume and aromatic raw material.

The CosIng database contains information on the ingredient's identity, notably identifiers such as INCI name, Ph. Eur., INN, IUPAC, and their chemical names; its registration numbers according to EINECS/ELINCS, CAS; its function(s) in cosmetics and all mandatory restrictions, conditions of use and warnings.

The database does not constitute a

list of ingredients necessarily authorized for use in cosmetic products, although they have been assigned with an INCI name (International Nomenclature Cosmetic Ingredient)⁷⁰. The qualification of a product is to be decided by the national competent authorities, under the supervision of the courts, on a case-by-case basis, taking into account all the characteristics of the product. In addition, the use of any ingredient in cosmetic products must be supported by a safety assessment of the product.⁷¹

If an ingredient is not registered in CosIng, it may still be listed in the cosmetic product using its INCI name.

5.1 Cosmetic Products Regulation, Annex II – Prohibited Substances

Annex II of Regulation (EC) No 1223/2009 contains substances which are banned from use in any cosmetic products marketed for sale or use in the European Union. Among the 1,600+ substances listed in this annex⁷², there are those which relate to plant extracts. Examples:

- Substances that are prohibited in cosmetic products, regardless of their function. Examples:

66. <https://eur-lex.europa.eu/legal-content/EN/ALL/?uri=CELEX%3A32009R1223>

67. <https://eur-lex.europa.eu/legal-content/EN/ALL/?uri=celex%3A31976L0768>

68. <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32019D0701&from=EN>

69. https://ec.europa.eu/growth/sectors/cosmetics/cosing_en

70. https://ec.europa.eu/growth/tools-databases/cosing/layout/CosIng_Manual.pdf

71. https://ec.europa.eu/growth/sectors/cosmetics/cosing_es

72. https://ec.europa.eu/growth/tools-databases/cosing/pdf/COSING_Annex%20II_v2.pdf

- Lobelia inflata L. and its galenical preparations: CAS number 84696-23-1; EC number 283-642-6⁷³
- Physostigma venenosum Balf (Calabar bean, ext.): CAS number 89958-15-6; EC number 289-638-0⁷⁴
- Substances that are prohibited in cosmetic products for a specific function. Example:
 - Verbena plant extracts and derivatives, other than absolutes: CAS number 8024-12-2; EC number 285-515-0, prohibited for use as a fragrance ingredient⁷⁵.
- Substances that are prohibited in cosmetics products except for normal content in natural essences and subject to the maximum concentration limits and other conditions. Examples:
 - Safrole (5-Allyl-1,3-benzodioxole): CAS number 94-59-7 / EC number 202-345-4, except for normal content in the natural essences used and provided that the concentration does not exceed: 100 ppm in the finished cosmetic product, 50 ppm in products for dental and oral hygiene, and provided that Safrole is not present in

toothpastes intended specifically for children ⁷⁶.

The complete list of prohibited substances can be found in Annex II, and its updates are available on the platform of the European Chemicals Agency: Cosmetic Products Regulation, Annex II - Prohibited Substances ⁷⁷.

5.2 Cosmetic Products Regulation, Annex III - Restricted Substances

Annex III of Regulation (EC) No. 1223/2009 lists substances whose use in cosmetic products in the European Union is banned, except under certain conditions; i.e. field of application or use, maximum allowable concentration limits in finished products, and any additional limitations.

Annex III contains 26 substances known as fragrance allergens, subject to mandatory labelling conditions due to their allergenic potential. Their presence in cosmetic products must be mentioned on the packaging when their concentration exceeds the threshold of 10 ppm (0.001%) in leave-on products and 100 ppm (0.01%) in rinse-off products⁷⁸.

These substances are listed in a document drafted by the European Commission's Scientific Committee on

73. <https://echa.europa.eu/substance-information/-/substanceinfo/100.076.010>

74. <https://echa.europa.eu/substance-information/-/substanceinfo/100.081.459>

75. <https://echa.europa.eu/legislation-obligation/-/obligations/100.077.713>

76. <https://www.echa.europa.eu/web/guest/substance-information/-/substanceinfo/100.002.133>

77. <https://www.echa.europa.eu/cosmetics-prohibited-substances>

78. <https://www.edqm.eu/en/guidance-essential-oils-cosmetic-products>

Consumer Safety⁷⁹. Although these mostly concern compounds from essential oils, the list also contains two plant extracts: *Evernia prunastri* extract and *Evernia furfuracea* extract.

Examples of other restricted substances are:

- Various *Picea* species, e.g. *Picea mariana* oil and extract: CAS number 91722-19-9; EC number 294-420-3. Restriction: Peroxide value less than 10 mmol/L (This limit applies to the substance and not to the finished cosmetic product)⁸⁰.

The complete list of substances whose use in cosmetic products in the European Union is banned, except under certain conditions of Annex III and its updates are available on the platform of the European Chemicals Agency: Cosmetic Products Regulation, Annex III - Restricted Substances⁸¹.

5.3 Cosmetic Products Regulation, Annex IV – Allowed Colorants

Relevant for plant extracts used as colorants. These are included in separate technical sheet: Natural colours.

5.4 Cosmetic Products Regulation, Annex V – Allowed Preservatives

Not relevant for plant extracts.

5.5 Cosmetic Products Regulation, Annex VI – Allowed UV Filters

Not relevant for plant extracts.

6. Other standards

The physical, chemical and chromatographic characteristics of plant extracts are set by the industry. Buyers will set their own standards for plant extracts and expect suppliers to meet those, such as regarding extraction solvent, time and method. For example, companies increasingly prefer extracts produced by steam entrainment distillation over those that use solvents. With increasing safety and efficacy requirements, it is critical to ensure that extracts are consistent in quality. Buyer expectations and perceptions play a large role in determining whether they are interested in plant extracts or raw materials.

In addition, several ISO standards exist regarding extraction method, determination of compounds or composition and residues⁸². For example, ISO standard 22994:2021 Coffee extracts specifies the determination of the dry matter content of coffee extracts.⁸³ The compliance to these ISO standards as a market requirement varies across

79. https://ec.europa.eu/health/scientific_committees/consumer_safety/docs/sccs_o_073.pdf

80. <https://www.echa.europa.eu/web/guest/legislation-obligation/-/obligations/100.085.801>

81. <https://echa.europa.eu/cosmetics-restricted-substances>

82. https://www.iso.org/search.html?q=extract%20&hPP=10&idx=all_en&p=0&hFR%5Bcategory%5D%5B0%5D=standard

83. <https://www.iso.org/standard/74311.html>

buyers in the European Union. For example, compliance to ISO 9235 (Aromatic natural raw materials) is a minimum requirement for ingredients used in NaTrue-certified natural cosmetics⁸⁴. This standard covers various materials, including different types of plant extracts, gums, resins and essential oils.

COSMOS

The COSMOS standard covers all aspects of the sourcing, manufacturing, marketing and control of cosmetic products. Products that are COSMOS certified must be formulated using only ingredients that the standard allows. Raw materials must be certified or approved: Certified ingredients are organic, while approved raw materials are not organic⁸⁵. The complete list of COSMOS-certified cosmetic products can be found in the database: COSMOS-certified cosmetic products⁸⁶.

NaTrue

NaTrue is also a certification that experiences growth in the European cosmetics market, although not as widely as COSMOS, but equally applicable to both ingredients and finished cosmetics. The different certification steps are described on the NaTrue website and with documents available in Spanish⁸⁷. The standards include elements such as: prohibition of animal testing, organic production

and labeling, prohibition of the use of Genetically Modified Organisms (GMOs), use of aromatic natural raw materials according to the ISO 9235 standard, respect to biodiversity, etc.

7. Quality and safety requirements

7.1 Environment, Health and Safety (EHS)

Prior to starting a commercial relationship with a new supplier of ingredients, buyers in the European Union normally implement a supplier questionnaire to assess their Standard Operating Procedures (SOPs) regarding environment, health and safety – as well as general quality management in the manufacture of ingredients. This assessment is carried out differently by each company and it is part of an internal process. It is also part of a trust-building process between buyer and supplier. The supplier questionnaires may include subjects such as:

- Information about the company: year of foundation, address, contact information, location of the manufacturing site, type of company, main activities.
- Process of raw material sourcing and approval of suppliers.
- Implementation of Good Agricultural Practices.
- Production capacity.
- Company's organigram.

84. https://www.natrue.org/uploads/2019/06/EN-NATRUE-Label_Requirements_V3_8-1-1.pdf

85. <https://www.cbi.eu/market-information/natural-ingredients-cosmetics/how-prepare-technical-dossier-cosmetic-ingredient>

86. <http://cosmos-standard-rm.org/data/indexcp.php>

87. https://natrue.org/uploads/2019/05/ES-NATRUE-Label_Requirements_V3.8-1.pdf

- Experience / track record in international markets.
- ISO 9001 or the implementation of equivalent processes.
- Format and frequency of internal audits.
- Tools and instruments for quality management.
- Customer management processes.
- Processes of compliance with the regulatory framework of international markets.
- Capacity to comply with documentation obligations, such as technical data sheets, certificates of analysis and safety data sheets.
- Capacity to comply with REACH regulation.
- Processes of testing and verification of products to ensure compliance with applicable regulatory requirements and performance standards.
- Processes of verification, maintenance and calibration of machinery.
Existence of an in-situ laboratory and its accreditations.
Control processes related to: allergens, contaminants, foreign materials, stock segregation, packaging and shipping of products.
- Cleaning schedules for: warehouse, manufacturing plant, packaging area.
- Recall processes and contingency plans.
- Implementation of health and safety policies.
- Implementation of a system based

- on the principles of hazard analysis and critical control points (HACCP) + HACCP flow chart.
- Implementation of other systems for quality and safety management: ISO22000 / FSSC22000, IFS, BRC, etc. / Good Manufacturing Practices (GMP); ISO 22716 (Cosmetics – Good Manufacturing).
- Procedure for reporting of accidents on site.
- Fire safety plan.
- Personal Protective Equipment (PPE) plan.
- Pest control plan.
- Implementation of organic certification.
- Registration in sustainability platforms such as SEDEX, etc.
- Implementation of a corporate social responsibility policy or code of conduct, supported by certifications such as SA8000.
- Certifications such as fair trade (Fairtrade, Fair for Life), and other: FairWild, UEET, etc.
- Employee training programs.
- Certifications for environmental management such as ISO14000.
- Implementation of internal environmental policies.

The **Workbook for preparing a technical dossier for cosmetic ingredients: vegetable oils, essential oils and botanical extracts**⁸⁸, compiled by Andrew Jones (Fair Venture Consulting)⁸⁹ and ProFound – Advisers In Development⁹⁰ for the Dutch Center

88. <https://www.cbi.eu/market-information/natural-ingredients-cosmetics/how-prepare-technical-dossier-cosmetic-ingredient>

89. <https://www.fairventure.com>

90. <https://thisisprofound.com>

for the Promotion of Imports from Developing Countries (CBI)⁹¹ has a few examples of questions from supplier questionnaires that are implemented by European buyers. For instance:

<p>Do you have a documented Quality Management System? If yes, how often is it reviewed?</p> <p><i>Please include a copy of the index page or Standard Operating Procedure (SOP) and outline content of SOP</i></p>
<p>How do you approve your raw material suppliers?</p> <p><i>If referring to a SOP, please provide a copy or outline of content of SOP</i></p>
<p>Do you have formal risk assessments such as HACCP systems in place?</p> <p><i>Please also provide a flowchart</i></p>

Raw material production

Buyers in the European Union may expect their suppliers of plant extracts to guarantee that the botanical raw material used in the manufacturing of these ingredients comply with Good Agricultural Practices (GAP), based on the principles of risk analysis and prevention, Integrated Pest Management (IPM) and Integrated Crop Management (ICM). Some buyers will also expect suppliers to comply with the World Health Organization's guidelines on Good Agricultural and Collection Practices (GACP) for medicinal plants⁹², but usually only required by more

technical products and directed to the health market.

In general, demand for organic-certified plant extracts is lower than for organic essential and vegetable oils, though this differs per buyer. Organic certification requires compliance with Regulation (EU) No 2018/848 of the European Parliament and of the Council on organic production and labelling of organic products. Organic certification is often perceived as a guarantee of product safety, since it lowers the risks of cross-contamination by pesticides and other impurities.

Manufacturing

At the manufacturing level, buyers of plant extracts in the European Union expect suppliers to implement a system based on Hazard Analysis and Critical Control Points (HACCP). This is a minimum requirement for food ingredients / food supplements, but it is also commonly applied for cosmetics ingredients, especially when the product has microbiological parameters or specifications.

Additional certifications covering quality management, and which are internationally recognized, such as ISO 9001, also contribute to the reputation of a natural ingredient supplier and can represent a competitive advantage especially among larger (multinational) buyers.

91. <https://www.cbi.eu>

92. <https://apps.who.int/iris/handle/10665/42783>

The implementation of Good Manufacturing Practices (GMP) for natural ingredients for cosmetics, based on the guidelines of the European Federation for Cosmetic Ingredients (EFfCI) could also be an additional competitive advantage. However, there are costs involved, and European buyers will not always require it. Before engaging in such initiatives, consult the relevance with your potential European buyer.

7.2 Documentation requirements

The documentation requirements for different natural ingredients for cosmetics like plant extracts varies widely according to the level of knowledge / familiarity of a specific ingredient to the European market and to a specific European buyer. If an ingredient is well-established on the European market, the efficacy and safety data are most probably wellstudied and understood, and a supplier will not have to conduct further tests.

However, if a supplier is introducing new ingredients to the market, they will have to compile a **ingredient dossier** which contains and evidences all its safety and efficacy data prior to its introduction to the market. The data used in the compilation of a dossier are derived from a supplier's own

research and/or from secondary sources of public domain; example: the safety and efficacy of your ingredient, history of use, production methods and any other relevant information⁹³.

A useful guide for the preparation of a dossier for natural ingredients for cosmetics is the **Workbook for preparing a technical dossier for cosmetic ingredients: vegetable oils, essential oils and botanical extracts**⁹⁴, compiled by Andrew Jones (Fair Venture Consulting)⁹⁵ and ProFound – Advisers In Development⁹⁶ for the Dutch Center for the Promotion of Imports from Developing Countries (CBI)⁹⁷. This guide explains the different elements which a dossier should contain.

The 3 essential documents required by buyers of plant extracts in the European Union are⁹⁸:

- *Technical Data Sheet (TDS)*
- *Certificate of Analysis (CoA)*
- *Safety Data Sheet (SDS)*

The information that must be included, as well as the instructions on how to prepare these documents, can be found on the **Workbook for preparing a technical dossier for cosmetic ingredients: vegetable oils, essential oils and botanical**

93. <https://www.cbi.eu/market-information/natural-ingredients-cosmetics/how-prepare-technical-dossier-cosmetic-ingredient>

94. <https://www.cbi.eu/market-information/natural-ingredients-cosmetics/how-prepare-technical-dossier-cosmetic-ingredient>

95. <https://www.fairventure.com>

96. <https://thisisprofound.com>

97. <https://www.cbi.eu>

98. <https://www.cbi.eu/market-information/natural-ingredients-cosmetics/how-prepare-technical-dossier-cosmetic-ingredient#setting-up-your-dossier>

extracts⁹⁹. In general, the content of these 3 documents for plant extracts consist of the following elements:

Technical Data Sheets (TDS)	Certificate of Analysis (CoA)	Safety Data Sheets (SDS)
<ul style="list-style-type: none"> Product Name, INCI Name CAS number EINECS number Tariff heading Succinct description of the manufacturing process Description and aroma Color, smell Main components of the plant extract Components and features Percentage of impurities pH Humidity Microbial analysis Refractive index Solubility in water, oil, alcohol Preservatives Protein content and allergen declaration Toxic components (names, concentration) when applied Traditional uses of plants and plant parts Summary of efficacy data Life Type of packaging Recommended storage Access permission and other certificates 	<ul style="list-style-type: none"> Product Name, INCI Name CAS number EINECS number Tariff heading Description and aroma Color, smell Main components of the plant extract Percentage of impurities pH Humidity Microbial analysis Refractive index Toxic components (names, concentration) when applied Traditional uses of plants and plant parts Summary of efficacy data 	<ul style="list-style-type: none"> Product Name, INCI Name CAS number EINECS number Toxic components (names, concentration) when applied Studies, reports, published references on safety and efficacy of the substance Toxicological tests Local toxicity Primary skin irritation Eye irritation Allergenicity sensitization Systemic toxicity Mutagenesis: Ames Test acute toxicity Efficacy studies (own, published) Summary of efficacy data Security Data Summary Recommended conditions of use: product type, body part, frequency of use, method of application, concentration in cosmetic products Environmental data <p>The information should be organized in the 16 sections established by the Globally Harmonized System.¹⁰⁰</p>

Other documentation which may be required by EU buyers of plant extracts include:

- Animal Non-Testing Declaration*
Note that the article 4a (2.3) EU cosmetics directive provides the regulatory framework for the phasing out of animal testing for

cosmetics purposes, applicable both to ingredients and finished products¹⁰¹.

- Allergen declaration*
- CMR declaration* (non-mutagenic, carcinogenic, toxic)
- BSE/TSE declaration*
- Heavy metals declaration*
- Non-Nanoparticles declaration*

99. <https://www.cbi.eu/market-information/natural-ingredients-cosmetics/how-prepare-technical-dossier-cosmetic-ingredient>

100. https://echa.europa.eu/documents/10162/23047722/guidance_sds_v40_peg_en.pdf/42dc8be5-b033-3062-8ee8-6d3a1b8dcb99

101. https://ec.europa.eu/growth/sectors/cosmetics/animal-testing_en

7.3 Packaging and Transport

For the packaging of plant extracts, particularly those classified as hazardous substances and that contain a *UN number*, the use of packaging approved by the United Nations (UN-approved) is a basic requirement of buyers in the European Union. To obtain specific information on UN-approved packaging and transport of these substances refer to the UN Recommendations on the Transport of Dangerous Goods¹⁰².

Some plant extracts are classified under Class 3 (flammable liquids, UN number: 1169 extracts, aromatic,

liquid; UN number: 1993, flammable liquid) and Class 9 (miscellaneous dangerous substances and articles, including environmentally-hazardous substances; UN number: 3082: environmentally hazardous substance, liquid, n.o.s.)¹⁰³. The specific hazards association to specific plant extracts should be verified on the inventory of the European Chemicals Agency (ECHA)¹⁰⁴. For each class and category, there are specific recommendations in terms of packaging, packaging materials, instructions and restrictions to be applied in the storage and transportation of substances; example:

UN number	Name and description	Class or division	Subsidiary hazard	UN packing group	Special provisions	Limited and excepted quantities		Packagings and IBCs		Portable tanks and bulk containers	
								Packing instruction ¹⁰⁵	Special packing provisions	Instructions ¹⁰⁶	Special provisions ¹⁰⁷
1169	Extracts, aromatic, liquid	3	-	II	-	5 L	E2	P001 IBC02	-	T4	TP1 TP8
1169	Extracts, aromatic, liquid	3	-	III	223	5 L	E1	P001 IBC03 LP01	-	T2	TP1
1993	Flammable liquid, n.o.s.	3	-	I	274	0	E3	P001	-	T11	TP1 TP27
1993	Flammable liquid, n.o.s.	3	-	II	274	1 L	E2	P001 IBC02	-	T7	TP8 TP28
1993	Flammable liquid, n.o.s.	3	-	III	223 274	5 L	E1	P001 IBC03 LP01	-	T4	TP1 TP29
3082	Environmentally hazardous substance	9	-	III	274 331 335 375	5 L	E1	P001 IBC03 LP01	PP1	T4	TP1 TP29

As several plant extracts are classified as hazardous substances, and their packaging and transport are highly regulated, there are practical consequences to suppliers of these

ingredients. European buyers expect their suppliers to understand the Globally Harmonized System (GHS) well, and to apply these concepts in the packaging and transportation of

102. <https://unece.org/rev-21-2019>

103. https://unece.org/fileadmin/DAM/trans/danger/publi/unrec/rev21/ST-SG-AC10-1r21e_Vol1_WEB.pdf

104. <https://echa.europa.eu/information-on-chemicals/cl-inventory-database/>

105. https://unece.org/DAM/trans/danger/publi/unrec/rev18/English/Rev18_Volume2.pdf

106. https://unece.org/DAM/trans/danger/publi/unrec/rev18/English/Rev18_Volume2.pdf

107. https://unece.org/DAM/trans/danger/publi/unrec/rev18/English/Rev18_Volume2.pdf

their ingredients.

It is important that the packaging used for plant extracts does not interact with its contents, and that it is chemical-resistant. As such, the use of plastifiers is not allowed. Liquid extracts are commonly packaged and transported in high density polyethylene (HDPE) drums, stainless steel/aluminum barrels or Intermediate bulk containers (IBC) with inner coating that prevents oxidation of the product. The specific preferences will depend on each buyer. In addition, some buyers of cosmetic ingredients will require that packaging be approved for food-grade use.

Bulk solid extracts are normally packaged and transported in 25 kg paper bags, although some European buyers prefer polypropylene bags for better maintenance of product quality. Less known extracts are sometimes packed in smaller volumes, example: bags of 1-5 kg.

8. Final recommendations

- Read more about the regulatory framework, buyer requirements and market developments for plant extracts in the European Union:
 - Centre for the Promotion of Imports from Developing Countries (CBI): Market

Information on Natural Ingredients for Cosmetics¹⁰⁸

- Food supplements Europe: Quality of Botanical Preparations. Specific Recommendations for the Manufacturing of Botanical Preparations, Including Extracts as Food Supplements¹⁰⁹. Although specific to food supplements, it brings interesting information to the botanical extracts in general.
- Consult official data sources in the European Union to learn more about the regulatory requirements:
 - European Commission¹¹⁰
 - EUR-LEX¹¹¹
 - Access2Markets¹¹²
 - The European Chemicals Agency (ECHA)¹¹³
- Comply with the minimum legislative requirements for plant extracts in the European Union:
 - Do not export threatened species, and their derivatives, which are listed in CITES or in the Annexes of the European Union's Wildlife Trade Regulations, or comply with the necessary export permits. Find out whether a species is listed in these Annexes by directly accessing Regulation (EU) No. 1320 / 2014¹¹⁴ and the Species+

108. <https://www.cbi.eu/market-information/natural-ingredients-cosmetics>

109. <https://foodsupsupplementseurope.org/wp-content/themes/fse-theme/documents/publications-and-guidelines/qualityofbotanicalpreparations.pdf>

110. https://ec.europa.eu/growth/sectors/cosmetics/legislation_en

111. <https://eur-lex.europa.eu/homepage.html>

112. <https://trade.ec.europa.eu/access-to-markets/en/home>

113. <https://echa.europa.eu>

114. <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:32014R1320>

website of the United Nations Environment Programme - World Conservation Monitoring Centre (UNEP-WCMC)¹¹⁵.

- Comply with the Nagoya Protocol in Colombia and in the European Union by understanding its implementation mechanisms and by monitoring your value chain from source to market. Facilitate information to your potential (European) buyer.
- Do not export prohibited substances and respect the specific limits of constituents where applicable.
- Make sure to provide the necessary technical information to your potential European buyer, and to facilitate any other documentation which will allow the importer and final buyer to comply with their legal obligations in the European Union. Provide a Technical Data Sheet (TDS), Certificate of Analysis (CoA) and a Safety Data Sheet (SDS), as well as other documentation required, complying with the necessary parameters.
- Comply with the requirements of the Classification, Labelling and Packaging (CLP) regulation by classifying, packaging, labelling and transporting your products according to the Global Harmonized System (GHS).
- Carry out the necessary composition analysis of your

plant extracts by an accredited laboratory.

- Collaborate with universities and other technical and research institutions for the elaboration of studies and documents that can evidence the efficacy, safety and performance of your ingredient(s), and organize this information into a dossier.
- For exporters of plant extracts that fall under REACH regulation:
 - Prior to engaging in the registration process, verify whether your potential European buyer demands more than one tonne of your product per year. Ingredients traded in less than one tonne per product, per company, are exempted from the REACH regulation.
 - If your potential European buyer requires you to present a REACH Certificate of Compliance, search for an authorized and qualified EU-based “only representative”¹¹⁶ to fulfill these duties.
 - Seek collaboration with other Colombian companies handling the same ingredient and engage in a collective process for its registration and authorization required by the REACH regulation. Not only can this lower the actual costs, but also facilitate processes such as the compilation of the necessary information for technical and

115. <https://www.speciesplus.net>

116. <https://echa.europa.eu/support/qas-support/browse/-/qa/70Qx/view/scope/reach/Only+Representative+of+non-EU+manufacturer>

scientific dossiers.

- Comply with requirements related to quality management and Environment, Safety and Health (EHS):
 - Implement processes of Hazard analysis and critical control points (HACCP) in the manufacturing plant, based on the Codex Alimentarius; the implementation of HACCP should be evidenced by a flow chart and possibly through a certificate. This is a minimum requirement for food ingredients and food supplements, but it is also commonly applied for cosmetics ingredients, especially when the product has microbiological parameters or specifications.
 - Consider the implementation of quality and safety management systems. For example, ISO 9001 can represent a competitive advantage for specific European buyers, particularly larger companies. The Guide on Good Manufacturing Practices (GMP), of the European Federation for Cosmetic Ingredients (EFfCI), according to ISO 221716 (Good Manufacturing Practices for Cosmetics) could also represent a competitive advantage for some buyers. It is recommended, however, that you first study your target market and buyer before

engaging in auditing and de facto certification processes, which can be very costly.

- Consider alliances with producers who comply with Good Agricultural Practices, which will help you mitigate risks associated with cross-contamination from synthetic inputs. If your buyers are interested in organic-certified plant extracts, consider working with producers of organic raw material whose organic certification complies with the European Union's legislation.
- Explore other buyer requirements:
 - Identify other voluntary requirements according to your target market and buyer. Pay specific attention to sustainability requirements which may serve as a competitive advantage as a supplier. This can include certifications such as COSMOS¹¹⁷ and NaTrue¹¹⁸ or membership in sustainability platforms such as SEDEX¹¹⁹.
